

Data

Multi-view at Each Timestep (6 cameras)

Front View

Front-Left

Front-Right

Back-Left

Back-Right

Rear View

The diagram illustrates a multi-view camera system for a vehicle. At the center is a top-down view of a white car. Six blue beams radiate from the car, indicating the fields of view for six cameras: Front, Front-Left, Front-Right, Back-Left, Back-Right, and Rear. Surrounding this central diagram are six corresponding street-level images from New York City, each labeled with its respective camera view. The Front View shows a wide street with a yellow double line and buildings in the background. The Front-Left and Front-Right views show the left and right sides of the street from the front. The Back-Left and Back-Right views show the left and right sides of the street from the back. The Rear View shows the street directly behind the car.

Comparison

- 1 STRIDE reveals substantial performance gaps in current models.
- 2 Stronger fine-grained spatial-temporal understanding is required.
